General Comment

As an author, I strongly oppose proposals to give generative AI companies the ability to use others' work without regard to copyright and compensation. Copyright and fair compensation are not "unnecessarily burdensome requirements". Generative AI training models steal from authors' and artists' livelihood as Americans and profit off of theft. Generative AI companies are overvalued and major CEOs have admitted that they can not make a profit without being able to steal others' copyrighted work. Generative AI companies should stand and fall on their own merits- which includes fairly compensating authors and artists and getting their permission to use their work to train their datasets. There is no good reason for the federal government to step in and prop up this industry if it can not make it on its own.
