General Comment

The notion that AI training must ignore existing copyright law to be sufficiently agile relies on premises that are dubious at best. The first is that the marketplace cannot create and negotiate reasonably priced access to copyrighted material, or find ways to scale that price for low-budget startups and researchers. Of course they can. The second is that people will not voluntarily release or create data for AI training. They already do, and will continue to do so.

What the current market leaders really seek is entrenchment of their position. This is not the free market, and it is not rewarding innovation. It is rent-seeking and corruption.
