General Comment

Since AI is trained on the collective work and languages that humanity has built, any profits from AI should be collectively divided up among all humanity present and future. A dividend of ALL profits stemming from AI should be distributed evenly. There should be no private ownership of AI tools that were trained on data for which they don't have explicit permission from every single source who contributed.

All AI models should be public and non-profit and unable to charge for their use if they are trained by any source for which they do not have explicit expressed permission (not a default option on a public website or the like). I consider anything else plagiarism and theft. Why should someone be able to profit from stealing the collective work of humanity at the expense of others?

I am additionally concerned about biases inherent in the data on which AI is trained and its propensity to generate false answers. We need safeguards in order to ensure we move towards a more true, just and rational understanding of the world.

I think we need to think carefully and deeply about how to support the growth and development of humans in relationship to AI tools. What processes do humans need to engage in to build the kinds of expertise that allow them to critically and creatively assess the output of AI?

I personally do not feel our society is ready to handle the complexities that are emerging with AI, but at the same time I do not believe it is something we can reasonably stop. Thus we need to ensure we have a process for assessing harms (e.g., biased output that leads to increased surveillance of someone, lessens their likelihood to be selected for a job). It is important to recognize that AI is built on the backs of everyone who has ever spoken, written or created anything in any language or form and thus any benefits or profits should be distributed evenly and fairly. I am ambivalent about whether AI will be beneficial to society, but I am sure it will not be if we don't actively work to make it free, fair and for our collective benefit not private gain.
