General Comment

AI is largely seen as useless, incompetent and malicious. There are legitimate reasons for this view. AI has been devised by many corporate actors to deny citizens and consumers their right to due process by humans or by a competent authority. AI does not replace that authority.

If AI continues (some people appreciate it for its ability to synthesize a broad range of sources) robust protections for citizens and consumers must be present, in addition to citizens' right to independent appeal (not by AI) and overturn and decisions made by AI.
