General Comment

I don't even know where to start.

I work in the tech space, for a major tech company with lots of investments in the AI space and I can tell you three things, with absolute certainty:

- 1) AI does not work as advertised. It's output is flawed 60%+ of the time according to recent studies.
- 2) It is a tech bubble scam, it is the next evolution of Crypto and NFTs. All designed and pushed to sell the hardware necessary to run it.
- 3) Generative AI, and the companies that push it, can only survive on the outright theft of other people's hard work.

Embracing this technology is foolish at best, but allowing companies to steal Intellectual Property to train their models on and, ultimately, profit off of those models with no protections or remunerations for the creators whose IP was stolen, is yet another way this country is failing its citizens.
