General Comment

Ignoring intellectual property rights to allow OpenAI to regurgitate copyrighted material would be the death knell of countless creative industries. It won't matter that OpenAI will produce lousy work -- studios, publishers, and corporations in general will happily lay off entire workforces if they can simply instruct an AI to make a crappier version for free. People will always create art and literature, but it will become impossible to make a living doing it, because anything anyone publishes will be gobbled up and regurgitated by an AI for someone else's profit without attribution or compensation.

In addition to turning our own mass media cultural into computer-generated slop, this will also further exclude anyone but the independently wealthy from being able to devote the kind of time it takes to produce great art, literature, or even journalistic reporting. These things require dedicated time and effort, and if there's no hope of a financial return, people working 40+ hours a week will simply not be able to afford to pursue their passions or share them with the world.

Giving OpenAI free access to copyrighted work would be an unprecedented artistic calamity. Rather than submitting to pressure to throw away intellectual property rights, we should commit to embargoing for-profit work from overseas AIs that violate our copyright, and protect the invaluable cultural contributions made by writers, artists, scholars, filmmakers, and journalists both here in the US and abroad.
