General Comment

In the past few years, I have watched my students' motivation to develop their own thinking and writing skills plummet. While they continue to develop more original ideas than AI with prompting, they have much less resilience to try to exercise those mental muscles, because why should they try? I am terrified that we are decimating an entire generation of the human race. Even if generative AI was producing superior or original content that had real benefits, the cost to our children is much too high. Perhaps this will pay off for investors, but Americans will suffer both in the short and long term.

Also, as a scholar, writer, and visual artist, I do not grant Open AI or any other organization the right to use my intellectual property without fair compensation. Creators need to be paid for their work. If compensating writers and visual artists and musicians and animators for their work is too expensive for Sam Altman, then AI technology is too expensive for Sam Altman.
