General Comment

I oppose to training AI on other people IP. OpenAI and google do not have the right to take my information to train their AI model. Furthermore, I feel AI is a hammer searching for a nail. There meat be some nice things to be gained from it but over all it is over blown but because it has been so expensive to train the tech elite are desperate to find a use for it. No company should be immune for infringement due to their service or product. If these AI companies can program their product to send rockets to space and provide customer service, why can't they be coded to prevent copyright infringement. AI is deeply biased. ChaptGPT has been found to say awful and horrid things. Bias in coding needs to be addressed. Finally, I am deeply disturbed by the power suck that AI is causing. Why should we have to power a vanity project. There are so many reason technology must be regulated. This is not the wild Wild West. Regulate it.
