Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6860

Comment on FR Doc # 2025-02305

Submitter Information

Name: Eli Wennstrom

General Comment

AI is already doing irreparable harm to many industries as it scrapes from content that it has no permission to use. Not only is this something that would be punished if done by an individual, but there is also regularly little to no information checked on products that are made with generative AI. AI does not know if it is telling the truth or not. This leads to things such as mushroom foraging books giving misinformation that can lead to serious health problems or even death in people who attempt to use them.

Search engines are also flooded with misinformation, even to the point that searching up simple images is difficult. Looking for what a baby peacock looks like? Good luck sifting through pages of generative AI images for a real photograph.

Why should this unregulated tool be allowed to continue to scrape information and images with no restrictions? The end product is low-effort, low-quality, and often misleading. Even if the backers of this action plan disrespect the creative fields to the point that they do not care about the very real people who are losing their work and livelihood every day, they should at the very least care about the intellectual properties being infringed on every time a generative AI model is allowed to run free. Scrapers do not discriminate between hobbyist artists and massive corporations like Disney and Warner Brothers - it will steal from everyone if given the chance. If the generative AI models cannot survive without effectively stealing, they should be allowed to die.
