General Comment

OpenAI and other companies have publicly stated that their models, the thing around which they have constructed their entire business model, cannot function without using copyrighted material.

Copyright exists to prevent artist's work from being stolen or recreated without their permission or consent.

If generative artificial intelligence cannot create artwork without stealing the core components from other, copyright-protected sources, then the act of using generative AI to produce art constitutes an act of copyright infringement. Or to put it more simply, their business model is based on theft.

This business model is inherently illegal. Businesses that operate using illegal methods should not be permitted to do business in this country or any other.
