General Comment

As an artist who has watched the job markets for various facets of creative industries shrink dramatically over many years even before GenAI companies swooped in and stole the output of our labor and skills for the purpose of churning out garbage without consent or compensation, I and thousands of others cannot abide the US government or any entity granting carte blanche use of such a system.

On its own, the technology involved is not inherently evil, but what these corporations are trying to get away with is destructive beyond words to laborers who are already at their limits fighting for respect and compensation and jobs, and have been for a long time. The creators whose works have been and continue to be stolen by this machine are scraping by when they should be thriving and driving new ideas forward, something a machine that can only hallucinate things it has in its dataset cannot do. It cannot understand the choices it makes and make them with purpose, but a human artist, a human musician, and a human programmer can. It does not streamline any creative process, it creates only busywork of cleaning up its messes.

If you starve out all the human creators, you will gain no innovation, no creativity. We should instead be putting in place stronger protections FOR them, but this is the OPPOSITE of that. This will make us the country of cheap corporate slop, and the longer that goes on the worse it will be. We already look like villains to most of the rest of the world, this would just be another step in that direction.
