General Comment

AI companies only exist by stealing data, including a massive amount of copyrighted material, without getting permission from copyright holders, or paying any sort of appropriate fees or royalties. They are thieves who are breaking the law, and creating no real value or viable product in the process. They should not be given access to any data, let alone data that is legally protected, and furthermore, legislation should be introduced immediately to further restrict and limit their access to data obtained and abused illegally. Regulations exist to protect citizens and businesses from these types of abuse, and they should applied to this industry as well. Thank you.
