General Comment

Allowing Generative AI free reign in ignorance of previously established copyright laws would be a disastrous misstep both for those out favor and in of the use of Generative AI— For those against it, it is simply unethical, and due to being against all other existing laws; Unjust. Why make an exception? Why justify theft, if so many laws are placed against it? Does the country openly support stealing from its citizens and companies that make up its commerce?

And even for those in its favor, it removes the ability to train on one's curated works (i.e. The Walt Disney Company training on their own work) and self-promote its own properties and continue to support a healthy competitive environment for commerce. Ethical arguments aside, this move would simply collapse upon itself, primarily to the harm of the companies located within the United States.
