General Comment

Allowing AI to run unregulated not only has consequences on creatives, but also general identity on the internet. How will this fly internationally, where some places like the EU are already putting anti-AI measures in place? It will only isolate us further and, in case of a cyber emergency, no one will help us. What kind of spineless politician would let this pass? There will just be more generated content falsifying people online, and who knows if this will make politicians look bad. AI is already getting fairly close to real life, but not quite. I hope y'all can live with something horrendous being pinned on you...oh wait, you already are. Wait until people make photos of you, it's worse than text.
