## General Comment

Generative AI, since its inception in 2021, has proven to be not only unethical, but dangerous to everyone.

For example, the FBI charged a man last year for creating 10,000 CSAM with generative AI:

<https://www.theguardian.com/technology/article/2024/may/21/child-sexual-abuse-material-artificial-intelligence-arrest>

This is one way in which generative AI poses a danger to children.

Another is how generative AI has made it easier to make inappropriate deepfakes of young teens by their fellow peers as a way to bully and harass their victims, which has unfortunately caused suicide to occur: <https://www.theguardian.com/society/2024/jan/26/im-victim-of-failing-system-mia-janins-father-says-after-inquest-into-girls-death>

Speaking of suicide, generative ai chat bots have been noted to encourage teens to kill themselves, and unfortunately, one teen did in fact commit suicide: <https://apnews.com/article/chatbot-ai-lawsuit-suicide-teen-artificial-intelligence-9d48adc572100822fdb3c90d1456bd0>

Somewhat recently, a principal got in trouble for saying racist and antisemitic comments, but it turned out that a co-worker faked the voice audio using generative ai. Had it not been for the co-worker leaving behind evidence of doing so, it is hard to say whether or not the principal would have proven his innocence: <https://www.theverge.com/2024/4/25/24140556/ai-voice-cloning-baltimore-school-misuse>

Considering how much easier it is to manipulate voices, videos, and images as a result of generative ai, allowing generative ai to get better and better would be a genuine negative impact to our national security.

Furthermore, a book on how to forage for mushrooms written with generative ai led to an entire family to be poisoned and end up in the hospital. It is worth noting that the listing for the book online did not disclose that it was written with generative ai: <https://www.aol.com/family-uses-mushroom-identification-book-010036132.html>

Continuing on with generative ai and information, a study conducted by the Tow Center for Digital Journalism found that generative search tools "provided incorrect answers to more than 60 percent of queries": [https://www.cjr.org/tow\\_center/we-compared-eight-ai-search-engines-theyre-all-bad-at-citing-news.php](https://www.cjr.org/tow_center/we-compared-eight-ai-search-engines-theyre-all-bad-at-citing-news.php)

Generative ai has also polluted the internet. A project studying human language was cancelled because no one "has reliable information about post-2021 language usage by humans": <https://www.404media.co/project-analyzing-human-language-usage-shuts-down-because-generative-ai-has-polluted-the-data/>

Generative ai has also negatively impacted artists from all creative fields, as generative ai not only uses artists' work, but has led to some industries to not hire artists, impacting their livelihoods: <https://www.forbes.com/sites/robsalkowitz/2024/05/23/new-tech-gives-artists-a-fighting-chance-in-the-battle-against-generative-ai/>

Generative ai is also causing unprecedented amounts of pollution, increased electricity usage, and increased water consumption:  
<https://news.mit.edu/2025/explained-generative-ai-environmental-impact-0117>

Overall, there is absolutely nothing useful about generative ai. It is a danger to children, it is a danger to artists, it is a danger to all civilians and our institutions.
