General Comment

I do not believe AI holds a place in the future of the US. AI steals from my livelihood as an American and profits off of theft. It is not trained on legally copyrighted art, writing, videos, music, and more. It illegally scraps content it has no right to without the creator's consent and sells it as its own creation. That is theft, plagiarism, counterfeit, and sells a worse product than what it stole from. AI is overhyped and is fleecing the eyes of the American public. It cannot capture nuance and emotion like people can, and if these companies cannot continue to function without stealing from others then it isn't good or something the US government should be endorsing. If the US government believes that AI should be able to steal whatever it wants for training purposes it will open up corporations and the US government to enormous levels of corruption, and tells the public they have no rights or property because oligarchs get to decide what is and isn't theirs.
