As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-0wih-zinf
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6956

Comment on FR Doc # 2025-02305

Submitter Information

Name: Nick Har

Email: [REDACTED]

General Comment

Regulating AI will PROTECT pivotal creative economies. The protections we have in place pertaining to copyright are crucial to prevent Generative AI/LLMs from ruining (and outright stealing) the creative endeavors of every media outlet in our country. Loosening these regulations will open the door to mass plagiarism as Gen AI uses already-available creative works to train itself on, without the consent of the creators whose work is being scraped for content. There are plenty of studies in academia and economical theory to explain why this would drive a knife into our country's mass media environment, but to put it concisely, unregulated Gen AI will lead to a rise in deepfaked content, as well as muck up any effort to prove the integrity of social media outlets. Additionally, unregulated Gen AI will harm our nation's ability to advance any sort of semblance of AI dominance since, without proper controls and lawful regulations in place to protect the copyrights and ownership of the creations that the people it scrapes content from, it would demolish all creative sectors with generic-looking, generic-sounding, sanitized, and un-innovative content slushed out by a computer that takes genuine creative content made by actual humans and churns out cheap imitations of it while human creators are discouraged from putting out their own authentic material. Copyright laws PROTECT our artists, musicians, authors, and all other creators from having their hard work copied and illegally reproduced, which Generative AI and LLMs ultimately threaten.
