General Comment

"AI Dominance" is an oxymoron of a phrase. What sort of dominance can a nation possess when its people surrender all their thinking to machines?

Learning Language Machines, commonly referred to as "AI," are unethical because it cannot function flagrantly violated copyright and stealing material to add to its algorithms. LLMs are wasteful, because they require such high powered servers. And the top it all off, LLMs don't even work all that well. "Hallucinations" in which the algorithm simply invents new facts are common. There have to date been multiple cases of lawyers attempting to use AI generation for court documents, only for the machine to cite the precedence of cases that do not even exist!

Put it all together and it becomes clear: this current AI craze is a scam. The tech industry latched onto it after the ponzi scheme that was the NFT market collapsed, and now they're desperately to push a terrible product that doesn't work and actively makes life worse as the way of the future. The sooner this nonsense ends, the better.
