General Comment

I do not support the current avenue by which artificial intelligence from large tech companies have acquired materials to "train" these programs.

They bypassed copyright laws that protect all creators to obtain data and information to train their programs without informed consent, compensation, or the option to opt out of these programs.

Artificial intelligence is being forced upon the American people in all avenues of life under the guise of convenience when it's long term byproduct will squander the creative industries (arts, journalism, academia), make citizens more careless when researching information on anything, and consume massive amounts of energy to continue "training up" their artificial intelligent programs. While also being just as likely to make mistakes when tasks are ran solely on artificial intelligent programs.

These companies and businesses should NOT be allowed to "ask for forgiveness later" when they knowingly acted covertly to by pass any pushback they'd have received in order to legally procure the data they needed. These programs would NOT have been viable or produced adequate results had they been trained solely on common license and public domain properties (and these companies knew that).

I am AGAINST open artificial intelligence. Until there is legal retribution for the NEGATIVE impact AI has already put upon society, workers, and livelihoods, and legal protocols in place to CONTINUE to protect copyrights of intellectual property, I will and do not support AI.
