General Comment

As an artist who has spent their entire life crafting their skills, AI is an insult to the creative field. For the record, I am not entirely Anti-AI, I think it's amazing that science and technology has evolved to make things easier and more assessible to others. But technology such as this should be used for medical studies, psychology, and how to better our industrial world. NOT the creative world!

The point entirely of creativity is a reflection of the HUMAN experience. There is no life or fire inside the void eyes of AI for it simply cannot understand the intensity of the human experience. There is no shortcut and there is no quick answer to that.

Not to mention how harmful these generators are to the environment. Is killing the only planet we have worth 10 seconds of pseudo "expression" to sate narcissism? I think not. L
