

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-0ybb-6dn0
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6982

Comment on FR Doc # 2025-02305

Submitter Information

Name: Matthew Vimislik

[REDACTED]

General Comment

The current "policies and directives that act as barriers" to GenAI have largely come because of wronged parties asserting their rights to their work and words.

Large swathes of the training data for AI have come from scraping copywritten information that can be remade by AI in an attempt to skirt paying licenses to the original creators. For visual art and images especially, it's well-known that various artists names have become frequently used "prompts" to generate work similar in style and composition to their existing works.

Actors and musicians have found their voices and features being trained to create AI duplicates to steal their voices and likenesses. Reporters and researchers have their articles and books fed into the algorithms, and now when people search for information, instead of finding the original writings, it's paraphrased by the search engine AI, with no reference to the original sources.

There are some wonderful applications for specialized AI in science and engineering, doing public good that justifies using copywritten datasets as they were intended, but my experiences with GenAI, and seemingly most of their money, doesn't come from these applications. Instead, these companies are looking to make a quick buck by finding ways to steal the work of others and try to sell it back to us at a premium.
