General Comment

Generative AI is a complicated statistical tool for making derivative works--nothing more, nothing less. The fact that its output (usually) derive from a large body of works simultaneously does not make it any less derivative. The designers of generative AI tools themselves state that without unrestricted, uncompensated access to a large body of copywritten works the tools cannot function, i.e. the tools wholly depend on uncompensated creative work.

To allow a copyright exemption for generative AI is to make a mockery of copyright itself.
