

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-0yqy-azny
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-6995

Comment on FR Doc # 2025-02305

Submitter Information

Name: Vili Elonsalo

[REDACTED]

General Comment

As an AI art hobbyist using tools like Stable Diffusion and NovelAI weekly, and often using LLMs to help with coding, I urge you to prioritize policies that foster innovation, and allow for further development of AI and GenAI without overregulation.

I believe AI models should be allowed to be trained on publicly available data, including copyrighted material, provided that the outputs are transformative. Generative AI is a tool for creating new art and ideas.

AI based technology is valuable. It allows for new ways of collaborating with computers, innovation, and iteration of ideas. Overly strict controls would undermine this, jeopardizing U.S. competitiveness. Even as someone living in Finland, I feel like policies you make today will effect the direction of Europe too.

AI is also something that personally makes me feel like we are "living in the future", as it allows for many tasks that I thought impossible before. For example, recently there have been lot of news of China building versatile robots that use AI-driven movement, and in Japan there is a thriving AI art community that makes alternative tools for generation and manipulation of images, videos and music.

I fully support the outlined plan, if it helps to save resources for further AI development.
