General Comment

With copyright laws removed from AI, we will see an influx of deepfake pornography—including content with children—and thousands of counterfeit artwork that aims to put human designers out of business. This is literally the most anti-American thing the government can do regarding the whole AI discussion, because by allowing AI to go unchecked we will be losing thousands, if not MILLIONS, of American jobs across the political aisle, not just Democrats. Auto workers will be replaced by assembly line machines, graphic designers will be replaced by generative software, doctors and nurses will compete with AI-generated diagnostic software, and the military as a whole will have to constantly check itself to make sure the information it's collecting online is legit and not from spam bots that are determined to undermine our national security. I get that we're in a rush to remove all the executive orders that the last administration put in place but removing it entirely out of political spite is not the answer. So, so many Americans from multiple demographics and income levels will be put out of jobs if there are no copyright restrictions. Please, please reconsider this.
