General Comment

AI is not a useful or sustainable resource worth investing in. It does not generate anything that people have not already generated themselves, therefore all it is capable of is taking jobs from Americans. If an industry relies on content theft to survive, it should not survive. Automation is already available via other methods; AI does not offer improvements that don't already exist in more ethical forms. Investing in AI is just going to result in wasting federal funds in countless court battles due to rampant unlawful use. Major companies are already backing down from their plans involving AI after seeing that it is not useful or sustainable. AI sows confusion and misinformation online when mistrust is already at an all-time high. Resources should only be invested to control and counter AI, not increase its usage. AI does not increase accessibility; accessibility is already available through other more ethical means, and should be invested in further rather than investing into AI. AI is not worth the large amount of resources it takes to generate, especially considering some parts of the country can't even maintain steady resources for their current utilities.
