General Comment

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

My name is Brett Bullion. I am a freelance illustrator. I am very concerned with the creation of AI datasets in regard to copyright law and people's personal data, the environmental and energy costs of implementing AI, and the disruption that I have seen in the creative fields where AI has already been displacing artists.

AI datasets are created from the mass scraping of information, generally from the webpages on the internet, that the dataset creator does not have the rights to use. This is obviously a clear violation of copyright law and incredibly harmful to small, independent creators that rely on those protections to create unique works and prevent others from stealing and profiting on them.

Generative AI such as Open AI, MidJourney, ChatGPT, and the countless other generators that have appeared over the past few years have been used to replace creative workers across the board. This includes writers, artists, musicians, voice actors, etc., as well as many, many other fields outside of the arts. Knowing that these Gen AI services are created off of the stolen work of these creatives and then used to generate profit by the service provider and used by people and companies as a replacement for hiring artists is a clear violation of multiple rules in the Fair Use doctrine, especially the fourth rule which looks at the effect on potential markets for the copyright owner.

Allowing AI companies to circumvent copyright law in order to build these services that then replace the artists they stole from would devastate a group of workers that are already underpaid on average and struggling. On a larger scale it would also allow for the theft of much larger IPs controlled by large companies and studios, which would create incredibly murky waters for when an end user unknowingly steals an existing IP and uses it in their own project.

There are already many court cases going on covering these exact issues and I would hope that the executive branch would not overstep their bounds and brush these issues past the courts in order to appease AI companies.

There is much more to be said on the matter such as environmental impacts, how Gen AI is being used to create child pornography, has increased the amount of scam calls, texts, and impersonations used to steal from or damage others, as well as deep fakes used to create incredibly harmful disinformation. I'm sorry that I do not have the time to contribute more but I wanted to share my concerns.
