General Comment

AI is theft, simply. It's morally wrong, but also economically a scam by tech bros trying to dangle a fancy new thing in front of geriatric lawmakers that can not ask basic questions about the implications of a new technology without revealing how truly ignorant they are. Have you ever used AI and seen how truly useless it is? The results for anyone who actually knows about a subject they're applying AI to is comically bad — either lazily cobbled together or straight up wrong. There was recently an AI cookbook published that poisoned someone. It is useless, harmful, and tacky in every way. If strong rails are stripped away, everyone is vulnerable — including the own image and words of the lawmakers that support it. And there will be nothing they can do to protect their image and intellectual property, just like anyone else. Support it at your own peril. The kicker is, if they support it, you won't benefit — it won't generate a dime of profit for them anyway.
