General Comment

AI is an incredibly fallible tool that has no place in anything as sensitive or high stakes as "national security." It's a speculative market that has been hyped for years, but shown very little practical use aside from making silly images. The only "security" I can imagine to be at stake here is that of investor's wallets, as AI has been a huge money sink with no returns. Allowing them open borders to seek new ways to profit off of theft and plagiarism is only in the interest of a few, not the American public. The novelty is wearing off, and average American citizens are largely uninterested or distrustful of AI. It's a bubble that will eventually burst without money being funneled into it, and AI has no place in the future of the United States.
