General Comment

AI is a scam, built on plagiarism and theft from creators without their consent or cooperation. It is also a dead end, as multiple AI groups have admitted that there is not enough data available to train their models beyond what they are already capable of. The burdensome government relations that the Trump administration seeks to remove are copyright protections that have existed for a century or more. If AI is not able to exist without violating current US law, it will never be able to provide an actual return on investment, and should not be supported through artificial government spending. The market has spoken, and it can find no actual use for AI.

In no way should it be protected and supported by government intervention when it cannot provide a justification for its existence beyond fleecing the American public to make a small cohort of Silicon Valley VCs money. AI is a scam and should not hold a place in the future of the United States.
