Name: Anonymous Anonymous

Email: [REDACTED]

General Comment

The waiving of copyright protections for copyright holders in the matter of the use of copyrighted material for training data abdicates a critical protection for rightsholders in an age of increasing levels of automated plagiarism.

Large companies like OpenAI, Microsoft, Anthropic and others seek to obviate such protections in order to remove their responsibility for ensuring properly sought consent for the creators and companies theirs need to feed their large language models.

There may be a future for so-called AI tools in the united states, but it will not be built on the willful destructions of the very copyright protections that have helped build the country's creative economy.
