

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-15f3-1znc
Comments Due: March 15, 2025
Submission Type: Web

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-7167

Comment on FR Doc # 2025-02305

Submitter Information

Name: G McCormack

Address: United States,

Email: [REDACTED]

General Comment

As a published researcher, college level instructor, freelance author, and individual with a deep interest in technology, I have to fully oppose any action that gives practically complete and unfettered access to the data of all Americans. The action plan speaks to the need for access to data without the 'burdensome regulation' of government oversight. In considering the vast wealth of information available on the internet, unfettered access exempts companies from any standard of privacy for what is accessed. This includes information that was not shared by the individual in question. For example, revenge pornography and illicit photos of minors are readily available on the internet. Given the original response to 'Grok,' the AI introduced to X, LLM programs are susceptible to attacks from directed feeding of any and all information. Grok was trained to be an ultimate truth seeking service, and it has already been trained with information based on publically accessible data indicating potentially harmful information about Elon Musk and Donald Trump. Without regulation, a malevolent actor could feed an LLM doctored information to make a false claim, giving highly misleading information.

Additionally based on FERPA, HIPAA, and other laws protecting personal information such as grades in school, medical reasons for being unable to join the US Draft, and videos/pictures from past engagements that are construed falsely to the public, certain records are protected. The language in this action plan this far bypasses any and all safeguards to protect sensitive information that could harm and/or blackmail American citizens.

On a more anecdotal note, as someone who is active in the freelance art community, intellectual property is already being stolen at an alarming rate with no credit given to the original creator. Though I doubt the individuals responsible for developing this plan care in the slightest about individual property rights or creative licensing, theft is theft. Even ignoring any ethical considerations (of which there are many), the potential for harm by a bad actor in manipulating and weaponizing AI on that large of a scale is too high. Some personal data is meant to be private, and I can't imagine the backlash that could result from a bad actor accessing highly classified government files that are improperly secured, copying them, and sending them to a foreign agent. It only takes one spy or bad actor to manipulate the language in this plan to create a powerful weaponized database of information.

Also, it's literally saying that American citizens will have no guarantee of privacy or confidentiality for their records and information regardless of if they were the ones to release that information. The cornerstone of America is freedom, and this plan ensures there is no control over your data, meaning freedom to live a private life is stripped away.

This plan will lead to far more harm than good with how it is written.
