As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-15po-ap73
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-7178

Comment on FR Doc # 2025-02305

Submitter Information

Name: Eric Moore

General Comment

The field of "Artificial Intelligence" as it has come to be known in the last couple of years is a complete misnomer. It is not in any way intelligent. It is unable to analyze or comprehend any of the data it's given in any meaningful way and can only produce predictive output based on patterns of likelihood, the result of which is factually wrong alarmingly often. This technology is a complete dead end research wise that serves almost no useful purpose except in highly specific medical applications. The vast bulk of its use in the current market is merely to undermine and devalue the working creatives of the world via theft and plagiarism, always resulting in an inferior product that the public by and large recognizes as such and rejects commercially. No amount of lifting restrictions on use of copyrighted content for these algorithms to train on will make them anything more than slightly less error-prone pattern regurgitators, which will never serve a practical purpose that other, more specialized, less resource-demanding technologies don't already do better. I implore you not to grant any special permissions on developing this wasteful, pointless, intelligence-insulting field.
