General Comment

I just wanted to state very clearly that the American government SHOULD NOT UNDER ANY CIRCUMSTANCES grant exemptions of fair use to tech companies who wish to steal artists' hard work to feed into their own AI programs, like Microsoft and OpenAI. Their are thousands of artists who work tirelessly, day in and day out, to create truly beautiful works and pieces of media that enrich the lives and culture of everyday Americans, while also providing for themselves and their families. Now, Big Tech companies wish to steal this hard work, without the artists' consent, to feed into their AI programs and net them millions in profits with zero legal repercussions. This would not only ruin the lives of thousands of hard working artists who could very well be put out of work by these AI programs, it would also sully and disgrace the culture of the American people by subjecting them to grossly inferior media made by corporate entities that only care about profits, rather than giving anything meaningful back to the people. Artists deserve protection from these corporations, like OpenAI and Microsoft, and these corporations should not be given legal license to do whatever they want for the sake of profits. I just want to state my opinion and possible solutions I've seen that I think could properly handle this dilemma. Protect American creators. Do not create new copyright exemptions that allow Big Tech companies to exploit and steal from creators and everyday Americans without permission, compensation, or transparency.

This administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair marketplace with competition:

First, the government should ensure that creators and everyday Americans give effective consent, so that they can decide when and where their work is used by AI systems.

Second, the AI Action Plan should encourage a robust licensing marketplace, so that the incentive to create for small businesses is preserved. Their work has immense economic value, so the value generated by that work should accrue to the original creators, not just Big Tech.

Finally, the AI Action Plan should require transparency from Big Tech companies, requiring them to disclose what material is in their training datasets, and label what content is AI generated.

Now, with our society going forward, there will be a place for AI. One of my favorite works of art, the movie "Spider-Man: Into the Spiderverse," actually did use AI to aid in its animation process. But, that was a carefully curated tool used by artists to help create their film. But, generative AI, the kind being used by Microsoft and Open AI, is much more dangerous and must be very carefully controlled. Corporations' profits SHOULD NOT have greater importance than the livelihoods of hard-working artists and the lives and culture of the American people. Please, do the right thing and protect artists, NOT corporations.
