I am deeply concerned about AI being trained on personal data, personal creations, and anything human made without the expressed consent of the creator. We are treading dangerously into what can only be defined as the theft of ideas and personhood.

AI cannot create until a person has created something else first. and not even ONE person. hundreds of people, thousands. Years of work poured into a novel. A lifetime spent on a collection of poetry. Historical paintings with immense cultural significance. All boiled down into numbers, regurgitated by technology while also demanding vast amounts of natural resources to create something that might not even represent the result that was hoped for. What could the best end use of a product like this even be? An image of a blurry, painterly chicken sold at a home décor store that could have instead been created by or purchased from a living artist? A Hollywood film script that boils down all of what should technically be 'successful' in a film only to be described as generic slop that is forgotten within the year?

Is the human and environmental cost worth that?

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

What happens when this moves beyond generating images and internal emails. What if AI begins stealing patents and scientific achievements. What if it starts stealing faces, voices, music - what if it is used for fraud and to insight political infighting?

Oh wait. I think it already has.

I think there is the potential for AI - or let's call it what it is - advanced machine learning - in the world. There should be a focus on training it to detect cancerous tumors and blood abnormalities to help doctors help patients faster and more efficiently. We need to ask what AI can do for us. Not what it can take from us.

Currently, though, AI as it is used for content creation is actively ruining the lives that have spent years creating the work it is trained on, lives who have defined themselves through their creations - portfolios of art, writing, music, S T O L L E N and appropriated without their consent.

Stand up for your citizens. Do not let corporations steal from the people only to sell their hard work back to them. This is OUR data. OUR creations. OUR LIVES. And we do NOT consent to any of it being used.
