General Comment

Generative AI does nothing but regurgitate existing work, data, and information into a slurry that clogs our culture and damages our natural resources. Look at the studies showing how much less accurate Google has gotten since implementing its current AI features, and it becomes clear that this technology is a net negative even without its disastrous side effects. The actual work being done by our researchers, scientists, writers, and artists must be protected from this technology that does nothing but turn into quarterly earnings for the super-rich while destroying the environment and contributing to the misinformation of the public.
