General Comment

So-called AI (LLMs) is only useful in a small array of use cases, such as cancer detection.

I do not support the AI Action plan for the following reasons:

- Generative AI does not provide accurate information but instead guesses based on prior information and pattern matching. There is no guarantee the information provided by these LLMs can be safely acted upon.
- Generative AI is shown to reduce human critical thought.
- Generative AI uses prohibitive resources, specifically electricity and water to power and cool data centers as well as burns through CPUs and hard drives. It also requires human labor to check and correct its output.
- Generative AI such as OpenAI is only successful because it is trained on stolen data aka the creative work of thousands if not millions of artists, writers, and programmers. It is theft and its continued use impacts me as a programmer and writer. It threatens my livelihood while providing an inferior product.
