General Comment

The whole planet is covered in plastic garbage and that's what AI is going to do to our digital environment in a shockingly short amount of time. And people spend a lot of time online. Polluting social media and the internet is going to have a negative effect on people that will spill over into the real world. Burying everything useful on the internet in a bunch of fake garbage is going to drive people insane. How much time does the average American child spend connected to the internet? What's the upside here? The chance to destroy art as a viable career for future generations? Seems bad.
