General Comment

The same laws should apply to giant AI companies as to everyone else. If ordinary people are restricted by copyright law to the limited cases outlined by fair use for 70+ years after the work's creation, why should different rules apply to AI training? After all, an AI trained on a work may quote from it without attribution, perhaps significantly, recognizably so, thereby potentially causing the end user to plagiarize the work. If copyright law is inappropriate for the pursuit of this technology, either Congress must change the law, or AI companies must pay for access and use of this material like any other American.
