General Comment

Do not invalidate standing copyright law in order to allow development of AI. The notion of allowing unfettered access to data without reimbursement to the holder of the copyright flies in the face of all long-standing tradition in the US. If these items are necessary to continue development, then the company should pay for access to the data. 20 years ago people were being sued for hundreds of thousands of dollars for distributing music files; to allow a private company to take orders of magnitude works of art and literature is unconscionable.
