Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-7268

Comment on FR Doc # 2025-02305

Submitter Information

Name: K Bryan

General Comment

While some uses of artificial intelligence can help in terms of medical advances as well as helping with weather patterns, in limited fashion, I think that allowing Generative AI Companies (like OpenAI) to use copyrighted material for their machines is both unacceptable and downright terrible.

By using these materials, current creators of written work and illustrations, as well as even past literary authors and artists, will be providing unpaid work and without recognition, thus denying their contributions to their fields. Because of this, companies can create terrible works of literature and art with awful looking pictures that look uncanny or out-of-place as well as written works with factual-errors littered throughout, giving misinformation to millions. They do this in all in the name of saving money, not realizing that it is the human touch that gives them their income and capital gains from such works.

Ontop of that, there is also a real threat of using copyrighted materials with videos and sound to manufacture false news stories and events. That is why there should be rules and regulations in regards to AI. Giving companies an unlimited and unfettered access to everything published (past and future) will damage not only artists and writers but institutions and organizations that people turn to for things beyond that of entertainment.

So, as someone who wants a better future for all, do not allow this plan to carry through. Do not allow it to make it easier for those to use generative AI and the materials it scrapes from the internet and beyond. Do not allow those to use the works of others, ignoring it was those with the skills, talent and desire to make such works, who made it possible for generative AI to work in the first place. And do not allow this bill to give bad-actors an ability to make things worse for all through misinformation and distrust. Thank you.
