General Comment

Mainstream AI is not good. The current algorithm is not good, it takes too much resources for it to produce an output. It inhibits human creativity by stealing from everyone. I would consider it a plagiarism algorithm. People won't be able to tell the difference between AI and human work and things will go bad when we become too dependent on it. AI will train off of itself which will cause polarized results, which will give much more room for error.

Companies will sell AI garbage because people can't tell the difference. Even if you may feel that is okay, this is limiting what the human touch can do, like placing a ceiling. AI only knows from what already exists, only humans can give it new information. If we teach everyone to rely on AI for information, this will greatly decrease how much new information we gain.

I would like for all AI generated content to be marked as AI. Everyone should be able to distinguish AI from human content so that we can tell how real something may be. I would also like for there to be a limit to how much someone can generate. AI can do a lot for someone, but we cannot be dependent on it. And we don't understand the magnitude of the long term usage of AI.
