General Comment

AI companies have been violating copyright laws nonstop for the last few years, and now they want to escape consequence for those unscrupulous actions by begging for a retroactive exception to those laws.

Instead they must be held accountable; forced to clearly label any AI output as such, forced to disclose what content was used to train their AI, forced to remove any content that the copyright owners do not want them to use, and forced to compensate copyright owners via licensing agreements.

With proper transparency and enforcement of legal boundaries that already exist instead of tearing them down, Generative AI could co-exist with human creativity, but in its current state, it seeks only to steal and replace it.
