## General Comment

I have three main arguments to make against OpenAi being given exemptions with regards to IP permissions:

1. OpenAi has incorporated as a business. If it cannot afford to purchase the inputs it needs to make it's products, then it is not a viable business and shouldn't be subsidized by federal regulation. If it were a non-profit, perhaps that would be different.
2. Carving out special exceptions for our AI industry has made it less competitive internationally. Government subsidies for American companies and protectionism against the Chinese led to complacency that companies like DeepSeek have used to steal a march and put innovate American companies.
3. AI has not proven to be of practical valuable such that it deserves further special treatment from the US public. There is simply not a demonstrable use case of extreme value for this technology. If there were, they could charge high prices for their products and wouldn't need carve outs from government
