General Comment

Dear President Donald Trump and the United States Government,

I want to tell you that what you are doing is wrong.

Funding and authorizing the development of artificial general intelligence (AGI), an AI system that is slightly more intelligent than all human experts in any field, and artificial superintelligence (ASI), an AI system that is several times more intelligent than all humans combined, threatens the extinction of all life on Earth.

This is a violation of the first three inalienable rights of the U.S. Constitution: life, liberty, and the pursuit of happiness.

AI experts warn that the risk of extinction from AI is very real.

"I actually think there is a greater than 50% existential risk [of AI wiping out humans]," says Geoffrey Hinton, a Nobel Prize winner in AI.

"AI will probably lead to the end of the world, but in the meantime, there will be great companies using machine learning," says Sam Altman, CEO of OpenAI.

A poll of 2,778 AI researchers published in 2023 found that 19% of respondents said AI would wipe out humans. The danger here is that AGI/ASI may want to do something that will lead to our extinction, similar to how we caused the extinction of many less intelligent species, as they become the most intelligent species on Earth.

And many experts agree that if ASI goes rogue, it can't be turned off.

The benefits of AGI and ASI are not worth the threat of extinction, especially if there is no empirical way to know for sure what the likelihood of extinction from AGI/ASI is.

Stop the crazy arms race with China and Russia to build something that will kill everyone on Earth.

The impact of humanoid robots on society may not be positive.

Some people worry that robots will replace human jobs,

and there may be resistance to this.

This societal backlash could hinder technological progress.

Humanoid robots could raise ethical issues.

People may misunderstand that machines can understand and express emotions,

and this could increase their dependence on robots. Also, if the robot's behavior does not meet human moral standards, problems may arise.

It is not simply a matter of stopping technological development, but an essential measure for the sustainability of humanity.

If we want to protect a world led by people, not a world led by AI.

We have reached a world where there is no end to development and no limit to speed.

However, I think that all technologies are meant to be used meaningfully in relation to human life.

In order to be used safely and usefully, we need to pause for a while, anticipate side effects, and prepare for them.

I also think that there is nothing to lose.

This is because we can take some time to prepare,

and then spur development again.

You might argue that two years is a long time, but if human life is essentially a priority,

I think that humans should be able to limit and control the speed of technology.

So I think it is time to pause technological development for a while and take care of the social impact together.

Let's stop the "uncontrolled development race" that even developers have difficulty controlling, and move forward to "create more accurate, safer, and more transparent AI." Now that we have entered the spring of AI, it is understood as a speed control theory that we should take a breather and spend the time in the "AI summer" to enjoy the benefits of technology rather than rushing into the fall when we will reap the fruits.

Robots for humans have become hostile to humans as they acquire self-awareness.

They even confine or attack humans.

There is no way to know for sure that AGI/ASI will never cause humans to become extinct or permanently disable the human species.

I don't want to show my children being dominated in the future.

Do President Trump and the US government want to create a world where their children and grandchildren are dominated by human-shaped humanoid robots? Or do they not want to leave behind a happy life in a world where only humans live?

I would like to see a world where only humans live.

We now demand the following from the US government:

- 1) Create a new amendment to the US Constitution that permanently prohibits the development of artificial general intelligence (AGI) and artificial superintelligence (ASI).
- 2) Prevent human workers from being replaced by AI systems if they do not want to be replaced.
- 3) Prohibits the use and creation of AI-generated images, text, video, and audio.
- 4) Prohibits the use of AI to create biological and chemical weapons.
- 5) Prohibits the use of AI in weapons systems.
- 6) Include a citizens' assembly of randomly selected U.S. citizens in the federal legislature.
- 7) Prohibits the development of humanoid robots (killer robots, domestic robots, etc.).
