## General Comment

OpenAI is trained on too wide a spread of data, and as such what it outputs is often incorrect and harmful. Simply adding more data to it, one that circumvents the intellectual rights of our artists and other creative workers, is not going to magically make OpenAI's output better. The messy data already inside OpenAI's model will not be corrected by simply adding more data to it. AI is not magic. Machine learning is a very deliberate process that works best with a clear aim in mind and clean data.

In addition, we should value our artists' and creators' work. There is no better mind or creator than a human mind. We should encourage people to create on their own, let children draw art using their own minds and hands. Nurturing that creativity will lead us to true innovation. OpenAI is not a mind that can be nurtured to bring us innovation. It is a machine reliant on 0s, 1s, and electricity. It cannot and should not replace a human's creativity. Protect our creators.
