General Comment

My name is Clara Biesel and I am writing as an educator with deep concern about the loosening of any laws around AI technology.

In the classroom I teach writing, and have seen the devastating effects of my students increasing dependence on insecure, unverifiable drivel they produce using the “tools” that AI is claiming to give them. Rather than being a key to knowledge, generative AI in the classroom has lessened my students’ skills, dramatically muddled the waters in terms of where they can find reliable information, and by making a plagiarism machine that is not only easily available but baked into their word processors, massively increased my own workload.

I am disgusted by the ways in which the copyrighted information on the internet has been indiscriminately fed into the large language models for generative AI, and as someone who has long posted my own intellectual and creative labor to the internet, I am intensely frustrated by the ways in which the content posted to internet at large is being used for profit without credit or consent.

What if the US were to lead the world’s technological advancement and promote human flourishing by commitment to protecting the work of its citizens? To fight against misinformation? To make our technology more transparent? To show credit where credit is due? Robin Wall Kimmerer says that “all flourishing is mutual” and I will say that by promoting generative AI and its isolation of profit into the hands of the few while extracting value from the many is the opposite of human flourishing.

Thank you for your work on this topic, and I hope you will consider the people whose voices would be stolen by a loosening of copyright law.
