General Comment

There is no practical use for generative AI. It doesn't bring us closer to actual, functional artificial intelligence. It has nothing to do with the pattern recognition AI we're already successfully deploying in the sciences. Its only purpose and supposed value is the replacement of human artists and writers. Which will just destroy millions of jobs and create more slop nearly nobody's actually interested in seeing or engaging with.

There is no practical reason to even allow generative AI to exist. None the less to give its developers complete freedom from the enforcement of copyright laws. Why on Earth would anybody who doesn't own one of these content piracy companies want or support this? And maybe this will mean more to you- if you give generative AI companies permission to completely ignore copyright laws, why the Hell should any American pay them any heed? Why should any American ever follow any law that some classes of citizens are arbitrarily given the right to not abide by? You either have copyright protection laws, or you allow groups like OpenAI to have free and open access to people's private and copyrighted works. You cannot have both.
