General Comment

As a technology worker, I do not want AI to be propped up by special government rules and government spending. The bubble is going to burst and take many companies with it, and when it does I do not also want my tax money going down the drain. Rather than encouraging competition, these regulations will PREVENT innovation by giving them a special dispensation to not play by the same rules that the rest of us do. AI, or at least "AI" as defined by the companies doing a public relations blitz, is not the future.

As a creative, the steps and theft these companies have admitted to doing is a gigantic moral evil, and if they were not being shielded from the consequences artificially, they would not be as successful as they have been.
