General Comment

Generative AI relies on mass theft to be trained, and requires unconscionable amounts of resources to function. It provides bad information and makes bad art (when it is not unpredictably simply recreating art from its training set), and doesn't exist to do better. Rather, it exists to strip employment from humans who are perceived to cost more.

It is overhyped the same way NFTs were largely by the same people, and is just as useful. The scam involved is less obvious but no less unpleasant.
