General Comment

I am deeply concerned by the threat that AI poses to American citizens. Large language models are built from illegally processed human-created work. This intellectual property has been stolen and used to train models that are so deeply untrustworthy.

These models vaguely mimic human creations. They endanger all of us by encouraging misinformation through their inability to answer questions correctly, and their environmental impact will likely prove catastrophic if left unchecked and certainly if expanded.

The use and further development of these technologies should not be aided, funded, used, or otherwise encouraged by the U.S.

government. In fact, more robust protections should be put into place to protect creators and other citizens from the dangers of this reckless and unethical technology.

I am in support of using existing law to pursue the prosecution of AI companies for every instance of theft. I also support the development of further protections requiring these companies to gain written consent from the original creator for every item it wishes to use for model training. I also would like to see more protections for children from this dangerous technology and for regulations that ensure there are truth standards that must be met before AI continues to be used in web browsers as an integral part of internet searches. I also believe that every citizen should be able to opt out of the use of AI technology, in relation to both private companies and federal, state, and local governments to ensure private and personal information is never shared without permission with AI systems.
